

Manage Authentication Methods

At the end of this episode, I will be able to:

1. Implement and manage authentication methods, including Windows Hello for Business, passwordless, tokens, and the Microsoft Authenticator app

Learner Objective: *Implement and manage authentication methods*

Description: In this episode, you will learn about the various authentication methods supported by Azure AD. This includes FIDO2 Security Keys, Microsoft Authenticator, SMS, Temporary Access Pass, Third-Party Software OAUTH Tokens, Voice Call, Email OTP, and Certificate-Based Authentication.

-
- To enable the different authentication methods for use with Azure AD - visit the Azure Portal -> Azure Active Directory -> Security -> Authentication Methods
 - Methods include:
 - FIDO2 security key
 - Microsoft Authenticator
 - SMS
 - Temporary Access Pass
 - Third-party software OATH tokens
 - Voice call
 - Email OTP
 - Certificate-based authentication
-
