Implement Azure AD Password Protection

At the end of this episode, I will be able to:

1. Implement and manage Azure AD Password Protection

Learner Objective: *Implement Azure AD Password Protection*

Description: In this episode, you learn about Azure AD Password Protection. This includes a discussion of how the feature works and how to enable the feature and manage it.

- Azure AD Password Protection helps protect your infrastructure against weak password usage by your employees.
- With this feature, a default global banned password lists is automatically applied to all users in the Azure AD tenant.
- You should also use other security mechanisms like MFA to help protect the infrastructure.
- You can also define entries in a custom banned password list.
